

Summary

Final-year undergraduate with strong interest in **Natural Language Processing and applied Machine Learning**. Experienced in developing transformer-based NLP systems, multilingual dataset engineering, and predictive modeling through research and internship work. Skilled in Python, PyTorch, TensorFlow, and HuggingFace, with experience building scalable ML pipelines and evaluating cross-lingual transfer learning models. Seeking entry-level ML/NLP roles to develop impactful data-driven solutions.

Experience

Machine Learning Research Intern

Jul 2025 – Aug 2025

- Developed predictive algorithms on **100k+ patient clinical trial records** to identify drug efficacy patterns and safety signals, improving decision-making accuracy by **25%**.
 - Built automated **feature engineering pipelines** for structured and unstructured datasets, reducing manual analysis effort by **70%**.
 - Collaborated with interdisciplinary teams to convert research requirements into machine learning solutions supporting multiple healthcare studies.
-

Projects

Multilingual Fake News Detection System (Research)

- Built a **transformer-based classification system** to detect misinformation across multiple Indic languages.
 - Created automated pipelines to curate balanced multilingual datasets.
 - Applied transfer learning and few-shot fine-tuning to improve cross-language detection performance.
-

Product Review Sentiment Classification (NLP & Transformers)

- Fine-tuned a **DistilBERT model** on 20k+ customer reviews for sentiment analysis.
 - Deployed the model as an interactive application using modern ML deployment tools.
 - Achieved **92% classification accuracy**.
-

Human Activity Recognition System (Big Data & Machine Learning)

- Developed classification models using **7k+ smartphone sensor records from 30 participants**.

- Applied ensemble methods and **Support Vector Machines** with advanced feature engineering.
 - Achieved **96% accuracy** while maintaining computational efficiency.
-

Education

Bachelor of Technology – Mathematics and Computing

GPA: 7.19 / 10

2022 – 2026

Relevant Coursework:

Statistics, Machine Learning, Pattern Recognition, Neural Networks, Computer Science

Senior Secondary Education (International Curriculum)

2021 – 2022

Secondary Education (International Curriculum)

2019 – 2020

Skills

Programming

Python, C++, SQL

Machine Learning & Computer Vision

Deep Learning, CNNs, Transfer Learning, Grad-CAM, Medical Imaging

Natural Language Processing & Analytics

Transformers, Text Mining, Sentiment Analysis, Recommendation Systems

Platforms & Tools

Git, ML deployment platforms, Power BI

Libraries

NumPy, Pandas, Scikit-learn, TensorFlow, PyTorch, Matplotlib, Seaborn

Certifications

- Machine Learning Specialization
- Deep Learning Specialization
- Complete Machine Learning and Data Science Certification
- Foundations of Generative AI
